BUSINESS & TECHNICAL BUILD BLUEPRINT • CONFIRMED PHASE 1 SCOPE

MySect App Build Blueprint

Customer Mobile App, Secretary Firm Website, and MySect Admin Website

Prepared for Business Partner Alignment & Executive Presentation | 28 October 2026

EXECUTIVE DECISION — THE 3-MONTH MVP GOAL

Build **one shared platform** powering **three role-specific products**. Rather than building disconnected screens, the first 12-week release proves **one complete, end-to-end service flow**: guided customer intake via the Digital Assistant, structured case routing to the assigned Secretary Firm, human conversation, document exchange, formal customer approval, case completion, and central Admin oversight.

3 Months	3 Products	AI + Human	100% Isolated
12-Week MVP Target	1 Shared Backend	Guided Intake, Human Control	Firm & Company Data Security

Why MySect? (The Business Problem & Platform Solution)

Today, company-secretarial work is slowed down by scattered WhatsApp messages, lost email attachments, and repetitive follow-ups. Business owners lack visibility into their requests, while licensed secretaries spend valuable hours chasing basic details. MySect connects all three stakeholders on a single, structured workflow:

Product & Platform	Who Uses It	What It Delivers in Phase 1 (Months 1–3)
1. Customer App (Flutter Mobile App)	Company owners, directors & authorised contacts	• View authorised companies and compliance reminders at a glance. • Start any request through the Ask MySect Digital Assistant. • Upload requested documents, review prepared drafts, and approve/reject with a reason. • Track live request status and chat with the assigned Secretary once a case is opened.
2. Secretary Website (Responsive Web App)	Partner company-secretary firms (Managers & Staff)	• Receive structured cases pre-packaged by the Digital Assistant (company context + checklist). • Manage all client companies and staff workloads from a central Work Queue. • Take ownership of cases, open human conversations, request files, and send drafts for approval. • Track deadlines, internal notes, and completion records in one workspace.
3. MySect Admin Website (Responsive Web App)	MySect internal operations & support team	• Onboard and manage partner Secretary Firms and their staff accounts. • Assign or transfer client companies to responsible Secretary Firms. • Monitor escalated cases, support issues, and failed notifications. • Configure service categories, Digital Assistant intake rules, and review the full audit history.

Document Guide (10-Page Presentation Structure)

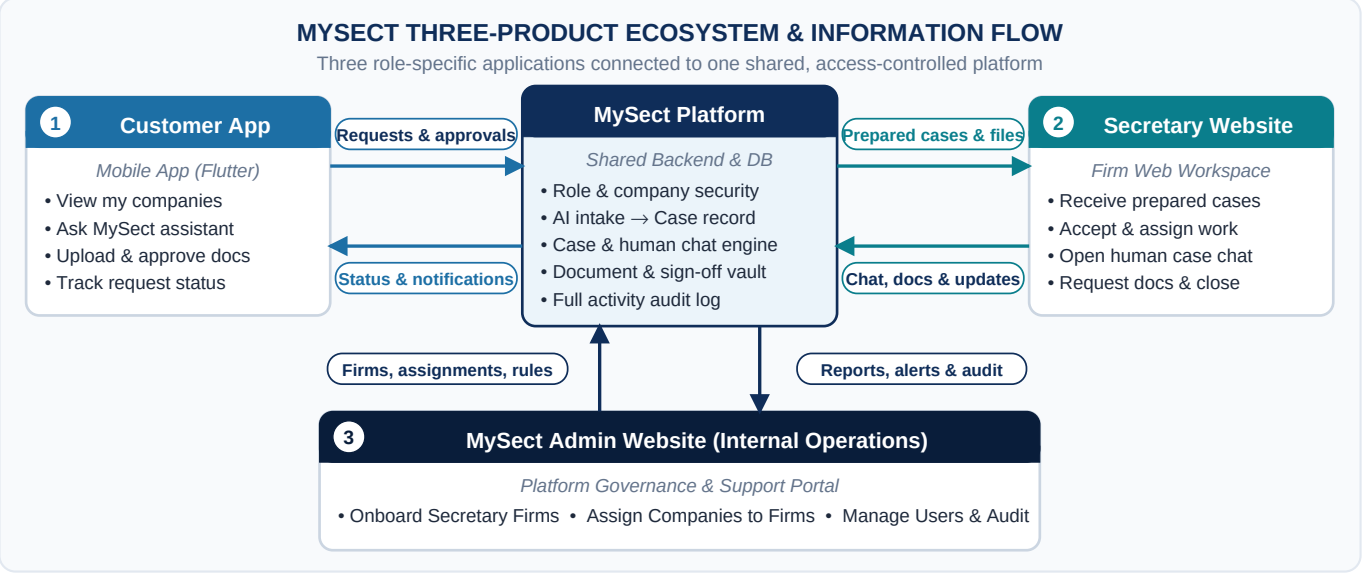

Pages 1–2	Executive Summary, Three-Product Ecosystem Diagram & User Roles Breakdown	**Pages 6–8**	Screen-by-Screen Scope: Customer App, Secretary Website, Admin Website & Architecture
Pages 3–5	Visual Workflows: End-to-End Request Flow, AI Intake Pipeline & Governance/Access Rules	**Pages 9–10**	12-Week Delivery Plan, Pilot Acceptance Checklist & Deferred Commercial Decisions

Scope Note: This document covers confirmed application build requirements only. Unconfirmed vendor pricing, legal conclusions, direct government (SSM/MBRS) integration, subscription pricing, and external e-KYC providers are listed on Page 10 for partner confirmation.

SECTION 1 & 2 • PLATFORM ECOSYSTEM & STAKEHOLDER ROLES

How Information Moves Across the Three MySect Products

Every user interacts with a product tailored to their role, while the shared MySect platform enforces permissions, routes cases to the correct Secretary Firm, and saves a complete record of every conversation and document.

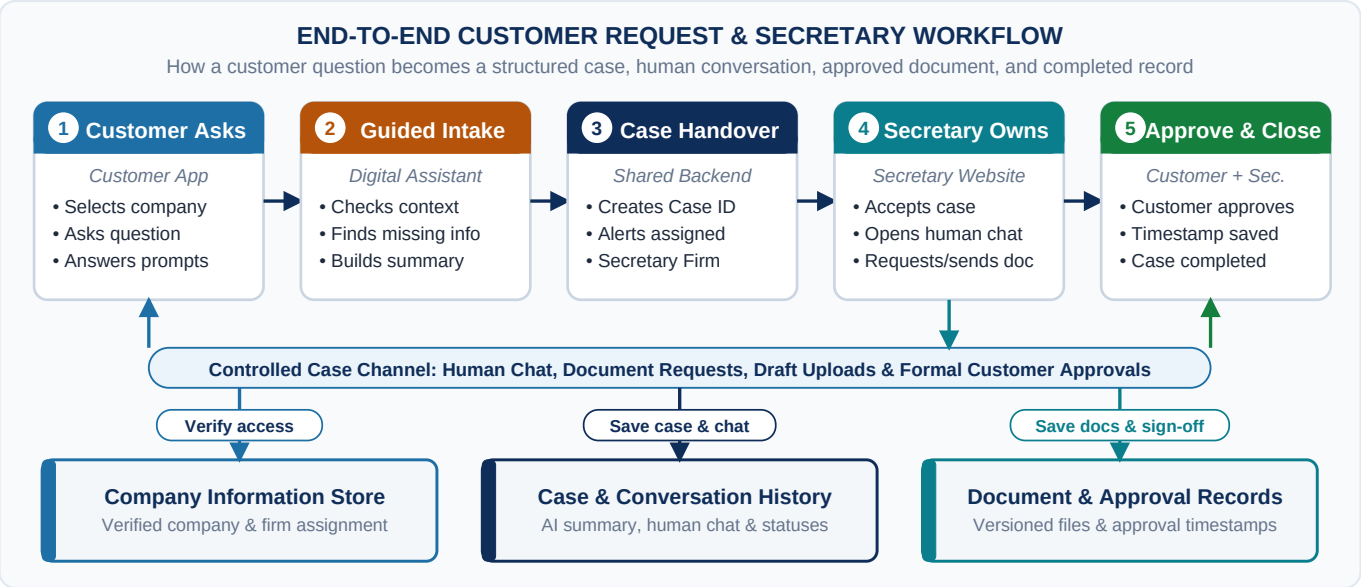

Confirmed User Roles & Responsibilities

User Role	Who They Are	Confirmed Capabilities & Responsibilities
2.1 Customer (Mobile App)	Company owner, director, or authorised representative	• Views only the companies they are explicitly authorised to access. • Starts questions and service requests through the Ask MySect Digital Assistant. • Tracks live request statuses and responds to checklists for missing information. • Uploads requested supporting documents and reviews prepared drafts. • Approves or rejects prepared items (with a reason) and receives status notifications.
2.2 Secretary Staff (Secretary Website)	Licensed secretary or operational staff at a partner firm	• Views only companies and cases assigned to their firm. • Receives structured cases prepared by the Digital Assistant. • Accepts ownership of a case and opens human conversation with the customer. • Requests missing information/documents and uploads prepared items for approval. • Updates case status, records internal notes, and completes the work.
2.3 Secretary Firm Manager (Secretary Website)	Partner, director, or team lead at a secretary firm	• Manages firm staff accounts, roles, and internal access permissions. • Assigns client companies and incoming cases to responsible staff members. • Reviews team workload, urgent queues, and tracked compliance deadlines. • Controls firm templates, service settings, and operational reports.
2.4 MySect Administrator (Admin Website)	MySect platform operations and support team	• Creates, onboards, and manages partner Secretary Firms. • Manages platform users, roles, and access permissions. • Assigns or transfers companies to partner Secretary Firms. • Reviews escalated cases, customer support issues, and failed notifications. • Configures service categories, notification templates, AI intake rules, and audit logs.

SECTION 6 • CORE OPERATIONAL WORKFLOWS

End-to-End Customer Request & Document Workflow

This diagram and walkthrough show how a customer question is captured, converted into a structured case, assigned to the responsible Secretary Firm, supported with documents and approvals, and tracked until completion.

Step-by-Step Application Workflows

Workflow Name	Initial Stages (Intake & Setup)	Execution & Completion Stages
6.1 Customer Request Workflow (10-Step Core Journey)	1. Customer asks the MySect Digital Assistant in the app. 2. The app confirms the company and request type. 3. Digital Assistant asks follow-ups for missing info. 4. Shared backend creates a structured Case record. 5. The assigned Secretary Firm is notified immediately.	6. A Secretary accepts and takes ownership of the case. 7. Secretary opens human conversation if required. 8. Documents and approvals are exchanged in the case. 9. The Secretary completes the case. 10. Customer receives final status and full history.
6.2 Company Assignment Workflow (5-Step Onboarding)	1. MySect Admin creates or confirms a company record. 2. Admin assigns the company to a Secretary Firm. 3. Secretary Firm Manager assigns responsible staff.	4. Authorised customers are linked to the company. 5. Every access and assignment is recorded in the audit history.
6.3 Document & Approval Workflow (5-Step Sign-Off)	1. Secretary requests a document or uploads a prepared draft. 2. Customer receives a notification in the mobile app. 3. Customer uploads, approves, or rejects with a reason.	4. The system records the exact action and timestamp. 5. The case status updates automatically for both sides.

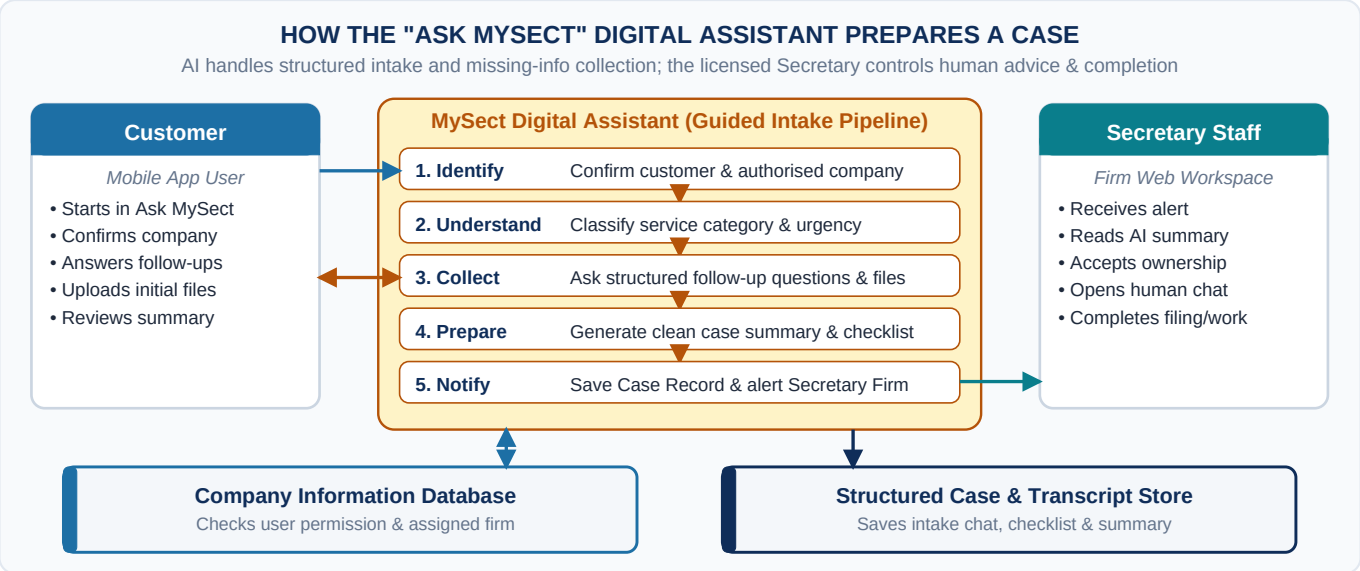

KEY WORKFLOW CONTROL PRINCIPLE

Every request, chat message, uploaded file, and customer approval passes through the structured MySect Case record. Nothing gets lost in personal WhatsApp chats or unmonitored email threads.

SECTION 3.4 & 6.1 • AI-GUIDED INTAKE VS. HUMAN SECRETARY CONTROL

How the Digital Assistant Prepares a Case for the Secretary

A core differentiator of MySect is how it combines AI speed with licensed human professionalism. Customers cannot open random human chats directly—the Digital Assistant prepares a complete, structured case first so Secretaries never start from a blank page.

Clear Division of Responsibility: Digital Assistant vs. Human Secretary

Stage	What the Digital Assistant Does (Automated Prep)	What the Assigned Human Secretary Controls
1. Initial Contact	Greets the customer 24/7 in Ask MySect, confirms which company they are asking about, and identifies the request category.	Not interrupted by vague or incomplete initial messages; receives an alert only when a structured case is ready.
2. Information Gathering	Asks structured follow-up questions based on Admin-configured rules and collects initial supporting files from the customer.	Reviews the AI-prepared issue summary, transcript, and missing-information checklist in the Secretary Website.
3. Case Ownership & Chat	Packages the structured Case Record and hands off to the firm queue. Cannot impersonate a licensed company secretary.	Accepts ownership of the case and decides when to open a direct human conversation thread with the customer.
4. Documents & Approvals	Can only use information the requesting customer is already authorised to access.	Prepares official resolutions/documents, uploads them for customer sign-off, verifies approvals, and marks the case complete.

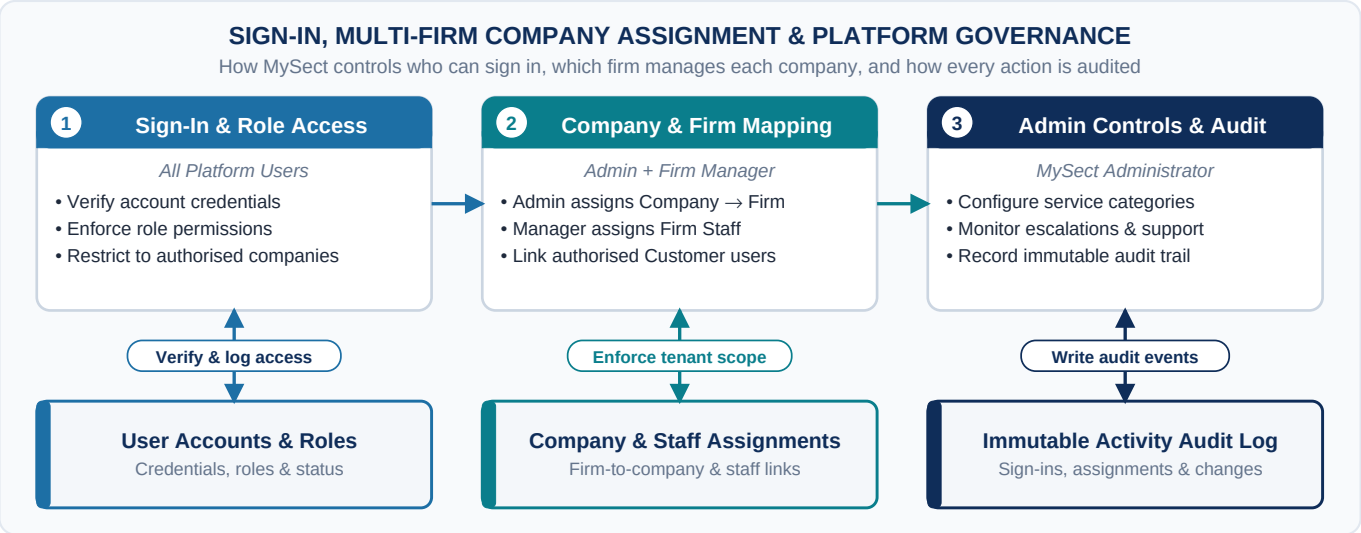

WHY PARTNER SECRETARY FIRMS VALUE THIS MODEL

The Digital Assistant acts as an intelligent front-desk intake coordinator—eliminating repetitive back-and-forth questions while keeping **100% of professional judgment, statutory compliance, and client approvals under the control of the assigned Secretary**.

SECTION 9 • SECURITY, MULTI-TENANT GOVERNANCE & ACCESS RULES

Sign-In, Company Assignment & Data Isolation Rules

Because MySect hosts multiple company-secretary firms and many client companies on one platform, strict tenant isolation is built into every database record and API check.

Confirmed Access & Data Protection Rules (Section 9)

Security & Governance Rule	How It Is Enforced Across MySect
1. Customer Company Isolation	A Customer sees and interacts ONLY with companies they are explicitly authorised to access. If a director owns three companies, they see only those three.
2. Secretary Firm Isolation	Secretary Firm staff see ONLY companies assigned to their specific firm. One partner firm can never see another firm's clients, staff, or cases.
3. Role-Based Case Visibility	Within a Secretary Firm, staff see cases assigned to their firm and filtered according to their staff role (Secretary Staff vs. Firm Manager).
4. Administrator Scope Control	MySect Admin access is strictly limited by administrator role permissions for platform operations, firm onboarding, and support.
5. Document & File Security	File access follows the exact same company and case permissions as the parent record. Uploaded and generated files are never exposed via public links.
6. Digital Assistant Data Boundary	The Digital Assistant can access ONLY information that the requesting user is already authorised to view—preventing any cross-company data leakage.
7. Mandatory Audit Trail	Every important access, sign-in, company assignment, document upload, approval decision, or configuration change is written to the immutable Audit History.

DATABASE ENFORCEMENT RULE

Every business record in MySect includes both the **Company ID** and the **Responsible Organisation (Secretary Firm ID)** so access permissions are verified consistently on every screen, API request, and file download.

SECTION 3 • PRODUCT 1 SCOPE & SCREEN INVENTORY

Product 1: Customer Mobile App (Flutter — iOS & Android)

The Customer App gives business owners and company representatives a clean mobile experience to view their companies, start requests through Ask MySect, upload files, and approve documents without needing to understand internal secretarial jargon.

App Page Group	Confirmed Screens & Elements	How It Helps the Customer
3.1 Access (Onboarding & Auth)	• Welcome screen • Sign in & Registration • Password recovery • Account verification	Provides secure onboarding, credential recovery, and account verification before granting access to any company records.
3.2 Home (Action Dashboard)	• Company summary • Open requests overview • Items requiring customer action • Important reminders • Recent notifications	Highlights urgent items (such as pending document uploads or approvals) immediately upon opening the app.
3.3 My Companies (Company Portfolio)	• Authorised company list • Company overview & contacts • Assigned Secretary Firm details • Open and completed requests • Company documents & approvals	Organises all records cleanly by company so directors managing multiple entities can switch between them effortlessly.
3.4 Ask MySect (Guided AI Intake)	• Start a question with Digital Assistant • Select or confirm the company • Answer structured follow-up questions • Upload supporting files • Review issue summary & submit case	Guides the customer through a structured intake conversation and packages a complete case for the assigned Secretary Firm. *Note: Customers cannot open a raw human chat here; the Secretary opens human chat after accepting the case.*
3.5 Requests (Case Tracker & Chat)	• Request list & Request details • Current status & Required information • Activity history & Assigned Secretary • Human conversation (once opened)	Gives complete visibility into every active and past request, required actions, and direct conversation with the assigned Secretary.
3.6 Documents & Approvals (Vault & Sign-Off)	• Document list & Upload requested doc • View prepared document • Review approval request • Approve or reject with a reason • View approval history	Centralises all company files and captures formal, timestamped customer approvals or rejections with mandatory reasons.
3.7 Notifications & Profile (Account Settings)	• Notification centre • Profile details • Security & Privacy settings • Help and support	Allows customers to review past alerts, manage personal security settings, and reach platform support.

SECTION 4 • PRODUCT 2 SCOPE & WORKSPACE INVENTORY

Product 2: Secretary Website (Partner Firm Workspace)

The Secretary Website is a responsive web workspace built for partner company-secretary firms. It organises incoming AI-prepared requests, team workloads, client chats, documents, and compliance deadlines into one unified operational system.

Workspace Module	Confirmed Screens & Features	Operational Value for the Secretary Firm
4.1 Access (Staff Security)	• Staff sign in • Password recovery • Additional security verification	Ensures only authorised firm staff can access their firm's assigned client companies and workspaces.
4.2 Dashboard (Firm Command Centre)	• New requests prepared by Digital Assistant • Assigned work summary • Urgent and overdue cases • Items waiting for customer info/approval • Recent activity	Gives staff and managers an instant daily overview of new escalations, urgent priorities, and items blocked by clients.
4.3 New Customer Requests (AI Triage Queue)	• New case queue & AI issue summary • Company and customer context • Request category & urgency • Missing-information checklist • Accept, assign, or return for more info	Eliminates manual intake—Secretaries review a structured brief and immediately accept ownership, assign to staff, or request missing details.
4.4 Work Queue (Case Management)	• All firm cases in one view • Filters: owner, company, status, priority, due date • Bulk assignment & Case status changes • Internal notes	Enables fast filtering, workload balancing, and status tracking across all active cases in the firm.
4.5 Case Workspace (Execution View)	• Request summary & AI chat history • Human conversation & Internal notes • Requested information, Documents & Approvals • Activity timeline & Completion details	Brings the entire lifecycle of a case onto a single screen—AI intake transcript, human client chat, private staff notes, files, and sign-off.
4.6 Companies (Client Portfolio)	• Company list, Overview & Customer contacts • Directors/officers & Shareholders summary • Assigned staff • Requests, documents, and activity history	Provides a complete digital corporate file for every company assigned to the Secretary Firm.
4.7 Calendar & Team (Deadlines & Staff)	• Tracked deadlines & Work reminders • Team members, Roles and access • Staff workload view & Assignment rules	Helps Firm Managers track statutory/work deadlines, manage team permissions, and distribute cases fairly.
4.8 Firm Settings (Firm Configuration)	• Firm profile & Staff management • Service categories & Templates • Notification preferences & Security settings	Lets each Secretary Firm maintain its own profile, standard document templates, and operational settings.

SECTION 5, 7 & 8 • ADMIN PORTAL, SYSTEM ARCHITECTURE & DATA MODEL

Product 3: MySect Admin Website & Platform Architecture

The MySect Admin Website provides central governance for onboarding partner firms, assigning companies, handling escalations, and auditing platform activity—all powered by a modular 4-layer technical architecture.

Admin Module	Confirmed Screens & Controls	Platform Governance Purpose
5.1 Dashboard	• Active secretary firms & Active companies • Open escalations & Support cases • Failed notifications & Recent admin activity	Real-time visibility into platform adoption, service exceptions, and operational health.
5.2 Secretary Firms	• Firm list, Create and edit firm, Firm status • Staff accounts, Assigned companies, Operational history	Full lifecycle onboarding and monitoring of partner company-secretary firms.
5.3 Companies & Assignments	• Company list & Company details • Assign or transfer Secretary Firm • Customer contacts, Access review, Case/doc activity	Central control to map companies to partner firms and transfer assignments cleanly when required.
5.4 Users & Access	• Customer, Secretary, and Administrator users • Roles and permissions, Account status, Sign-in history	Manage user accounts across all three products and audit sign-in security.
5.5 Cases & Support	• Platform-wide case search & Escalated cases • Customer support cases, Assignment correction, Issue history	Investigate escalated cases, resolve assignment issues, and support customers and firms.
5.6 Configuration & Audit	• Service categories, Case statuses, Notification templates • Digital-Assistant question rules & Feature switches • Full Audit history & System activity	Configure platform workflows and AI intake rules centrally while maintaining a complete audit trail.

Application Architecture (Section 7) & Core Data Records (Section 8)

Architecture Layer	Confirmed Technical Scope	Data & Hosting Layer	Confirmed Records & Infrastructure
7.1 Frontend Apps	• **Customer Mobile App:** Flutter (iOS & Android). • **Secretary Website:** Responsive web application. • **MySect Admin Website:** Responsive web application.	8. Core Database Records (15 Foundational Entities)	• **Identity & Tenants:** User, Role, Secretary Firm, Company, Company User. • **Assignments:** Firm Assignment, Staff Assignment. • **Cases & Chat:** Case, Case Message, Internal Note. • **Files & Governance:** Document Record, Document Version, Approval Request, Notification, Audit Event.
7.2 Shared Backend & 7.3 Data Services	• Auth & role access control, Company/assignment mgmt, Case/chat mgmt, Document/approval mgmt, Notifications, Audit & Reporting. • Relational database + File-storage adapter + Notification adapter + **Provider-neutral Digital Assistant connection** (swap AI vendors without rebuilding workflows).	7.4 Deployment Structure	• Hosted on the **existing Windows Server** environment using agreed container services. • Strict separation of **Development**, **Testing**, and **Production** databases, files, and secrets. • Backup and restore procedures tested before pilot launch.

SECTION 10 & 11 • EXECUTION ROADMAP & QUALITY GATES

Three-Month (12-Week) Delivery Plan & Acceptance Criteria

The first working version is structured into four pragmatic sprints over 12 weeks. Each phase builds toward proving one complete, secure customer request workflow across all three products.

Timeline	Milestone Focus	Confirmed Deliverables
Phase 1 Weeks 1–2	Confirm & Prepare (Foundation)	• Freeze the first priority customer service workflow. • Confirm final page list and role permissions across all 3 products. • Confirm database records and standard case status names. • Create clickable screen flows for visual alignment. • Prepare isolated development, testing, and container deployment environments.
Phase 2 Weeks 3–6	Shared Backend & Customer App	• Build core authentication and role-based access control. • Build company setup and firm/user assignment services. • Build Customer App: Home and My Companies screens. • Build Ask MySect guided intake flow. • Implement structured case creation, live status tracking, initial document upload, and notifications.
Phase 3 Weeks 7–9	Secretary Website (Firm Workspace)	• Build Secretary Dashboard and New Customer Requests triage queue. • Build filterable Work Queue and unified Case Workspace. • Enable Secretary-initiated human conversation and information requests. • Complete end-to-end document exchange and formal customer approval/rejection workflows.
Phase 4 Weeks 10–12	Admin Website & Pilot Preparation	• Build Admin Website: Secretary Firm management, user management, and company assignment. • Build Admin case/support oversight, system configuration, and audit history pages. • Execute comprehensive role and company permission security testing. • Verify backup and restore procedures, load pilot data, and complete User Acceptance Testing (UAT).

Pilot Acceptance Criteria — Definition of Done for Version 1 (Section 11)

The first working version is ready for live pilot use when all 11 end-to-end verification checks below pass:

Acceptance Check (Customer & Secretary)	Verification Requirement	Acceptance Check (Governance & Ops)	Verification Requirement
✓ 1. Customer Sign-In & Company View	Customer can sign in securely and view an authorised company.	✓ 7. Recorded Customer Approval	Customer approval or rejection (with reason) is recorded with a timestamp.
✓ 2. Guided Intake & Case Creation	Customer can complete the guided intake in Ask MySect and create a case.	✓ 8. Admin Firm & Company Control	MySect Admin can create firms, manage users, and assign companies.
✓ 3. Accurate Firm Routing	The correct assigned Secretary Firm receives the new case immediately.	✓ 9. Access Isolation Verification	All role, firm, and company access restriction tests pass 100%.
✓ 4. Full Secretary Case Lifecycle	Secretary can accept, assign, update, and complete the case.	✓ 10. Complete Audit History	Every important user, case, and admin action appears in the audit history.
✓ 5. Controlled Human Conversation	Secretary can open human conversation after taking case ownership.	✓ 11. Backup & Recovery Verified	Database and file backup and restore tests pass before pilot launch.
✓ 6. Case Document Exchange	Customer and Secretary can exchange documents securely through the case.	✓ Pilot Sign-Off Ready	All three products operate seamlessly on the shared backend environment.

SECTION 12 • SCOPE BOUNDARIES & COMMERCIAL ALIGNMENT ITEMS

Decisions Deliberately Deferred for Partner Confirmation

To keep the 3-month build realistic and avoid locking in unconfirmed vendor contracts or legal assumptions prematurely, the nine items below are deliberately separated from Phase 1 engineering. These items will be added only after the **business owner, company-secretary expert, legal adviser, or selected vendor** confirms them.

Deferred Item (Section 12)	Why It Is Deferred Now	How the Phase 1 Architecture Stays Ready
1. Digital-Assistant Provider & Final Pricing	Model vendor selection and commercial API/token pricing are under evaluation.	Backend uses a provider-neutral AI adapter so the selected LLM vendor can be connected or changed without rebuilding app screens.
2. Cloud-Storage Vendor & Storage Pricing	Final cloud object storage quotation and vendor contract are pending confirmation.	File-storage adapter abstracts file handling so storage can switch seamlessly between host containers and cloud object storage.
3. External Identity Verification (e-KYC)	Whether third-party e-KYC is legally/operationally required is still being confirmed.	Account verification states are built into the User model; an external e-KYC provider can be plugged into registration later.
4. Payment Provider & Marketplace Model	Payment gateway selection, fee splits, and marketplace billing terms require commercial sign-off.	Phase 1 proves core service delivery first; billing and payment collection modules can be layered onto active company accounts next.
5. Customer & Secretary Subscription Prices	Final monthly/annual pricing tiers and company allocation limits per firm are business decisions.	Firm and Company assignment tables are structured to support plan limits and subscription tiers once pricing is finalised.
6. Direct Government-System Submission	Direct electronic filing to SSM / MBRS requires regulatory approval and technical specification.	Phase 1 tracks preparation, customer approvals, and filing status while licensed secretaries lodge via MBRS as they do today.
7. Final Legal & Compliance Workflow	Specific statutory templates, resolution wordings, and compliance sign-offs require expert review.	Case checklists, templates, and approval workflows are configurable by Admin and Secretary Firms without code changes.
8. Secretary Mobile App	Secretarial work involves multi-company tables and document review best suited for desktop web.	The responsive Secretary Website covers Phase 1; the shared backend API can power a companion mobile app in a future phase.
9. Advanced Reporting & Automation	Advanced analytics and automated workflows are most effective after gathering real pilot usage data.	Structured case timestamps and audit logs capture all foundational data needed for Phase 2 business intelligence.

FINAL BUILD RECOMMENDATION — PROVE ONE COMPLETE END-TO-END FLOW FIRST

Build and test one complete request workflow across all three products before adding more service types.

The true first milestone is not the raw number of static screens completed—it is a **secure, auditable end-to-end flow** that a real Customer, Partner Secretary Firm, and MySect Administrator can use together successfully from initial question to completed case.
